DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Agee (US Pat. 4,973,453) in view of Jacobs et al. (US Pat. 5,639,401).

Agee discloses a system in which synthesis gas generator and a hydrocarbon synthesis reactor form heavier hydrocarbon products. Hydrocarbon synthesis may use catalysts such as the cobalt forms (abstract, figure 1, col. 2, lines 35-51, col. 4, lines 38-68, col. 5, lines 1-68 & col. 6, lines 1-24). Agee does not specifically teach the porosity or voidage of the catalyst.

Jacobs et al. disclose a catalytic product, used in hydrocarbon synthesis, which has a void fraction of 0.4 to 0.9 and preferably 0.6 to 0.9 (abstract, col. 7, lines 5-45). It would have been obvious to one of ordinary skill in the art at the time of the invention to determine the voidage or porosity ratios, as taught by Jacobs et al. in the Agee system, because it aids in the determination of efficient and through hydrocarbon synthesis reactions.

Allowable Subject Matter

Claims 17-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art does not teach a catalytic concentration of 30% or a linear dimension of 500 microns.

Claims 19-21 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art does not teach a separate saturation unit.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

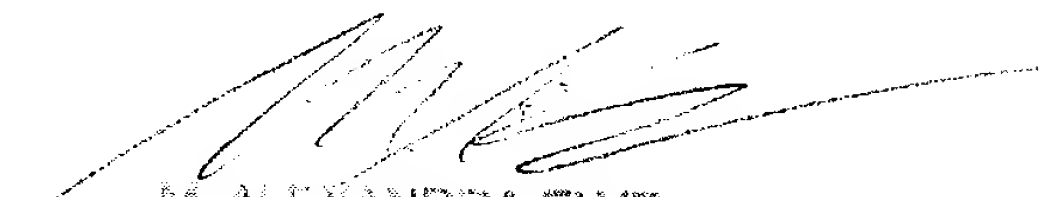

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See US PTO-892.
